ClimSel™ C28

Body

Equipment

Typically used for passive heating or cooling of people and animals, as well as for temperature stabilization of electronics.

Typical temperature stabilization span

27°C ↔ 31°C

80°F ↔ 88°F

Product description

ClimSel™ C28 is a salt hydrate based Phase Change Material that works by either the charging or discharging of energy at different temperatures. ClimSel™ C28 is delivered in various sizes of aluminium foil pouches. Its main components are sodium sulphate, water and additives.

Physical data

Phase change temperature: Solid	27°C / 80°F
Phase change temperature: Liquid	31°C / 88°F
Latent heat of fusion (see curve)	45 Wh/kg – 170 kJ/kg
Specific gravity	1.4 kg/litre
Thermal conductivity: Solid	0.98 W/m/°K
Thermal conductivity: Liquid	0.72 W/m/°K

Estimated functionality time

If the products are handled correctly, and the packaging is kept uncompromised, the product will continue to cycle as intended over time, with no known lifetime limit.

Note: ClimSel™ C28 will only work as declared for as long as the pouch is intact.

Usage guidelines

- Recommended storage temperature: 10-20°C / 50-60°F.
- Preparation before use depends on application conditions.
- Handle the ClimSel™ C28 pouch with care and do not bend when solid.
- Do not use damaged pouch, as the product functionality will be compromised.

Damaged products

- If damaged pouch is suspected, it shall be thoroughly inspected before use.
- Damaged products shall be discarded and treated in accordance with federal, state and local requirements for EWC (=European Waste code) = 060314.

Climator is one of the world's leading companies within PCM and temperature stabilization solutions.

Through our know-how, PCM expertise and innovation power, we develop project-based solutions that solve our customers' temperature stabilization and control problems.

We operate within four application areas.
